<b>Comment/Description</b>	7-PAH emission factors are used to estimate national emissions of hazardous air pollutants under Section 112[c](6) of the Clean Air Act (CAA) Amendments. E17134057 has replaced E524672219.		
<b>Definition</b>	The national emission factor calculated for a specific source category such as residential wood combustion or primary aluminum production based on the sum of 7 individual Polycyclic Aromatic Hydrocarbons generated as a result of the specific activity. Emission factors for 7-PAH are typically reported in lbs/ton or lbs/unit and may not include all 7 PAHs depending on data availability.
